Today is Saturday not Friday

## The Day Ahead Program

The 'Day Ahead' program is a revolutionary new process that will ensure that all your shipments arrive on time. And you don't even have to change shipping companies to do it! That's right; you can still use your current shipping supplier - even if it's unreliable - AND have your packages arrive on time.

How does it work? The name says it all. With 'Day Ahead', your company will pretend to live a day ahead of the rest of the world. That's right. Outside in the real world it may be MONDAY. But the minute your employees walk through the front door, it instantly becomes TUESDAY.

How does this help you with your late shipments? It's really quite simple:

Let's say you have a weekly shipment that goes out on MONDAY and is meant to arrive on THURSDAY. (Fig. 1) But unfortunately it's always arriving a day late on FRIDAY. (Fig. 2) With 'Day Ahead' your company will live a day ahead and pretend it's MONDAY when the rest of the world is home relaxing on SUNDAY. (Fig. 3) So when that shipment arrives late on FRIDAY, it's not really late. (Fig. 4) Why? Because your MONDAY was really SUNDAY. (Fig. 5) ...And FRIDAY is really THURSDAY...the day it was supposed to be there in the first place. (Fig. 6)

See how easy it is? [Click here](#) for all our orientation videos.

And that's not all. As part of the 'Day Ahead' program your company will receive a comprehensive 'Day Ahead' [Reminder Kit](#). It includes everything your company needs to reinforce the fact that you're living a day ahead of the rest of the world.

Do you ship internationally? Wondering how the 'Day Ahead' program works with countries like Australia that are already living a day ahead? Well, unfortunately it doesn't. But we've now introduced a new advanced program that can accommodate the International Dateline. It's called [Week Ahead](#).
